

Data Analytics Internship - Task 5 Final Report

Executive Summary

The Sample Superstore dataset was analyzed to identify business performance insights. The data was cleaned and processed using Python and Pandas. Key Performance Indicators (KPIs) were calculated to understand sales, profit, and order performance. The analysis helped identify important trends based on category, region, and customer segment.

Key Performance Indicators (KPIs)

- **Total Sales:** 2,297,200.86
- **Total Profit:** 286,397.02
- **Total Orders:** 5,009
- **Average Sales:** 229.86

Top 5 Insights

1. The Technology category generated the highest sales compared to other categories.
2. The West region achieved the highest profit contribution.
3. The Consumer segment contributed the highest sales among all customer segments.
4. The dataset analysis showed strong overall sales performance with positive profit results.
5. A total of 5,009 unique orders were analyzed to understand business performance.

Business Recommendations

1. Increase focus and investment in the Technology category because it generates the highest sales.
2. Improve marketing strategies in Central and South regions to increase sales and profitability.
3. Strengthen customer relationships in the Consumer segment through loyalty programs and personalized offers.

Tools Used

- Python
- Pandas
- VS Code
- Microsoft Excel
- Power BI

Conclusion

The analysis of the Sample Superstore dataset provided valuable business insights. The generated KPIs and recommendations can help improve decision-making and enhance business performance.
